

LUMMUS TECHNOLOGY

Schkoda O.-S.

Lummus Digital, London, United Kingdom

Lummus Technology has come forward and helping turn ambitious net zero targets into real emissions reduction while utilizing the capabilities of various business units in the organization. Lummus Digital (a JV of Lummus Technology & TCG Digital) has developed a solution under our Decarbonization Program to estimate and monitor the emissions from associated facility / process / technology in the refining and petrochemical industry. This allows users to estimate the equivalent CO₂ emissions attributed to any facility at complex, unit or equipment level. This solution has been developed with a very simple UI and require limited amount of information from the operator.
